

STOPAQ® OUTERWRAP PE

Product Information

Product description: Stopaq® Outerwrap PE is a flexible polyethylene mechanical protection tape, provided with a butyl rubber pressure sensitive adhesive. Stopaq® Outerwrap PE is used for the mechanical protection of corrosion preventing coating systems such as Stopaq® Wrappingband CZ and CZH. It is very well suited for underground and submerged applications. The heavy-duty adhesive layer provides good adhesion to the outer surface of the Stopaq® Wrappingband as well as to its own backing. The Outerwrap has good resistance to impacts, indentations and abrasion, and is also resistant to chemicals like alkalis and acids.

Features:

- Complies with ISO21809-3:2016 coating type 13A-2
- Easy to apply
- Cold applied
- Flexible, good conformability
- Good adhesion to Stopaq® Wrappingband as well as to its own backing
- Excellent impact resistance
- Wide service temperature range

Benefits:

- Very suitable for manual application, especially in hot climates.
- Excellent mechanical protection of Stopaq® corrosion prevention products
- Resists impacts and indentations which may occur during installation and backfilling
- Supports self-healing of completed coating system
- Very high resistance to ageing, even when exposed to maximum or minimum temperature for longer periods of time
- No curing or waiting time, ready for immediate service

Application examples

Pipes and Vessels: Mechanical protection of Stopaq® corrosion preventing coating systems applied on carbon steel pipeline structures and reservoirs.

Field joints: Mechanical protection of Stopaq® corrosion preventing coating systems applied on carbon steel girth-weld joints of on-shore pipelines.

Pipe fittings: Mechanical protection of Stopaq® corrosion preventing coating systems applied on carbon steel pipe fittings like elbows, bends, tees, reducers and flanges.

Product properties of Stopaq® Outerwrap PE

Colour	Black	
Thickness	0.5 mm	
Temperature range	Service:	-30 °C to +70 °C
	Short term max.:	+90 °C
Peel strength between layers	Before ageing (P_0): ^{A)}	
	<ul style="list-style-type: none"> ▪ @ +23 °C: ≥ 0.4 N/mm ^{B)} ▪ @ Tmax (+70 °C): ≥ 0.05 N/mm ^{B)} 	
	After thermal ageing for 100 days at Tmax+20 °C (90 °C): ^{A)}	
Thermal ageing resistance	<ul style="list-style-type: none"> ▪ $P'_{100}/P'_0 \geq 0.75$ ^{B)} 	
	After hot water immersion for 100 days at Tmax+20 °C (90 °C): ^{A,B)}	
	<ul style="list-style-type: none"> ▪ $P'_{100}/P'_0 \geq 0.75$ 	
Thermal ageing resistance	Ratio of elongation at break after thermal ageing for 100 days at Tmax+20 °C (90 °C):	
	<ul style="list-style-type: none"> ▪ $1.25 \geq E_{100}/E_0 \geq 0.75$ ^{B)} 	
Thermal ageing resistance	Ratio of elastic modulus after thermal ageing for 100 days at Tmax+20 °C (90 °C):	
	<ul style="list-style-type: none"> ▪ $E_{100}/E_0 \geq 0.75$ ^{A)} 	
Properties of complete coating system comprising Stopaq® Wrappingband CZH and Stopaq® Outerwrap PE		
Thickness	2.8 – 3.2 mm	
Self-healing test	Self-healing of an artificial defect of \varnothing 6 mm:	
Impact resistance	<ul style="list-style-type: none"> ▪ @ +23 °C: no holiday (\leq 24 hr.) ▪ @ Tmax (+70 °C): no holiday (\leq 24 hr.) 	
	Tested at 15 J and @ +23 °C: ^{A)}	
Indentation resistance	<ul style="list-style-type: none"> ▪ no holidays 	
	Tested at pressure 1.0 N/mm ² : ^{A)}	
Cathodic disbondment resistance	<ul style="list-style-type: none"> ▪ @ +23 °C: no holiday @ 20 kV, residual thickness \geq 0.6 mm ▪ @ Tmax (+70 °C): no holiday @ 20 kV, residual thickness \geq 0.6 mm 	
	After 28 days: ^{A)}	
Cathodic disbondment resistance	<ul style="list-style-type: none"> ▪ @ +23 °C: disbondment 0 mm, no holiday ▪ @ +70 °C: disbondment 0 mm, no holiday 	
	In all cases self-healing completed within 24 hr.	

^{A)} ISO 218089-3:2016 coating type 13A-2

^{B)} Surpasses requirements of ISO21809-3:2016

General order information

Product	Stopaq® Outerwrap PE is available in rolls, wound on cardboard cores, packed in cardboard boxes: <u>Product dimensions and contents:</u> 2 inch x 100 feet 3 inch x 100 feet 4 inch x 100 feet 6 inch x 100 feet
Handling	Handle with care. Keep boxes upright.
Storage	Store indoor, clean and dry, away from direct sunlight in a cool place below +45°C.

Application instruction - Job preparation	
Tools, equipment and auxiliaries	Scissors, knife and measuring tape
Additional coating materials	<p>Stopaq® Outerwrap PE is applied on Stopaq® corrosion preventing coating materials, such as:</p> <ul style="list-style-type: none"> ▪ Stopaq® Wrappingband CZ or CZH ▪ Stopaq® Paste CZ or CZH <p>Optionally, additional mechanical protective materials may be applied over the Outerwrap, e.g.:</p> <ul style="list-style-type: none"> ▪ Stopaq® Polyester ▪ Stopaq® Outerglass Shield XT ▪ Stopaq® Soil Stress Arrestor
High humidity	Stopaq® Outerwrap PE can be applied in a humid atmosphere. The substrate should be free from condensing water which can be reached by keeping the temperature at least 3°C above dew point.
Work area and substrate	The substrate should be dry, clean and protected against negative weather influences. Temperature of the substrate should preferably be above +10°C for the ease of product handling.
Product conditions	Stopaq® Outerwrap PE should be dry and the temperature of the product should preferably be above +20°C for the ease of application.

Application instruction - Brief version	
General	Specific application instructions are available at Seal For Life Industries, e.g. for wrapping of pipes, field joints, fittings, etc.
Example - Pipe wrapping	<p>Horizontal pipelines should be spirally wrapped from left-to-right or from right-to-left. Pipelines positioned with an angle deviating from horizontal should be wrapped from bottom to top (e.g. risers).</p> <p>In general Stopaq® Outerwrap PE should be applied with tension by gently pulling the roll of material, unless stated otherwise in specific application instructions.</p> <p>Start wrapping Outerwrap PE with two full circumferential wraps perpendicular to the pipe, leaving 3 mm of the previously applied Stopaq® Wrappingband visible at the boundary.</p>

Example – Pipe wrapping (continued)	<p>After application of the circumferential wraps, consecutive spiral wraps should have an overlap of ≥ 50%</p> <p>Avoid air inclusions. Avoid tenting and bridging</p> <p>Continue spiral wrapping until reaching the boundary of the area to be coated, leaving 3 mm of the previously applied Stopaq® Wrappingband visible at the boundary.</p> <p>When more than one roll of Outerwrap PE is needed to continue wrapping, an overlap on the end of the previously applied Outerwrap PE should be created of at least 100 mm.</p> <p>End wrapping with two full circumferential wraps perpendicular to the pipe. End with a quarter circumferential wrap of Outerwrap PE without tension. In case of wrapping on horizontal pipes, the tape end should face downwards ending at 3 o'clock position. Cut off in a tie-form.</p> <p>The applied Outerwrap PE must look smooth and tight and should be shaped around all details and into corners.</p>
--	--

Handling and commissioning	
Exposure to loads	Objects coated with Stopaq® Outerwrap PE should not be exposed to excessive loads e.g. from supports- or lifting equipment.
Immersion or burying	Immersion or burying is possible immediately after completion of the coating application. Consult data sheets for specific instructions of additional materials used. Backfill and compact with clean sand and filling material without sharp stones or hard lumps of soil.

Information	
Documentation	Extensive information is available on our website. Application instructions and other documentation can be obtained by contacting our head office, from our local distributor or by sending email to info@stopaq.com
Certified staff	Application of the described coating system should be carried out by certified personnel.
